Professional Profile

Analytical Computer Systems Engineering student (90/100 GPA) combining a strong foundation in Python, SQL, and data-driven logic with proven autonomy in remote work environments. Experienced in designing automated pipelines, managing relational databases, and integrating REST APIs to transform manual administrative tasks into efficient, functional software solutions. Skilled at capturing operational requirements to build reliable internal tools, automated data tracking, and intelligent conversational agents that streamline communication and drive team productivity.

Technical Skills

Programming: Python, SQL (MySQL, SQL Server), Java, JavaScript, HTML/CSS
Data Science & ML: Machine Learning, Random Forest, PySpark, ETL Processes, Feature Engineering, RNNs
Tools & Analytics: Power BI, Git, GitHub, VS Code, Postman, REST APIs, Business Intelligence

Projects

MLB Data Science Prediction System *Python, SQL, PySpark, Power BI*

- Designed and implemented automated ETL pipelines using Python to extract, transform, and clean historical sports metrics from REST APIs, ensuring high data integrity.
- Developed a predictive machine learning model utilizing PySpark and Random Forest algorithms to optimize game outcome forecasting accuracy and scalability.
- Executed advanced feature engineering and statistical anomaly detection techniques to isolate and correct training data irregularities.
- Integrated clean data models into interactive Power BI dashboards, enabling automated generation of analytical reports for data-driven business and performance insights.

MicroStop Detection Using Recurrent Neural Networks (RNN) *Python, Deep Learning, RNN*

- Engineered an RNN-based deep learning architecture specialized in event sequence analysis and chronological pattern detection for predictive maintenance logic.
- Implemented complex data preprocessing pipelines to transform noisy historical datasets into optimized, sequence-ready multidimensional arrays.
- Evaluated and fine-tuned model loss functions and performance metrics to ensure high precision and minimize false positives in sequence anomalies.

Education

Instituto Tecnológico de La Laguna Torréon, México
Bachelor's Degree in Computer Systems Engineering Expected Graduation: Dec 2026
GPA: 90/100

Certifications

- GitHub Copilot – Agent Mode (Microsoft, 2025)
- Introduction to Cybersecurity (Cisco Networking Academy, 2025)
- AI Fundamentals: Foundations for Understanding AI (IBM SkillsBuild, 2025)

Languages

- **Spanish:** Native
- **English:** Intermediate (Technical & Professional Communication)
